

Speed Wins in Finance

How AI Voice Agents Are Transforming Client
Acquisition Across Financial Services

Same leads. Faster response. More revenue.

stellarvoiceagents.com · June 2026

The Speed-to-Lead Crisis

In financial services, every minute of delay is revenue walking out the door. Leads contacted within five minutes are 21 times more likely to qualify than those contacted after thirty (MIT and InsideSales). Call a lead at one minute instead of two and you nearly quadruple the odds of a live conversation (Velocify). After five minutes, the chance of qualifying drops by 80%.

Yet the industry runs in the opposite direction. The average mortgage lead waits six hours for a response, and 40% of new mortgage leads are never contacted at all (Insellerate). Fewer than half of inbound calls are answered live by the assigned loan officer. The first firm to respond wins roughly 80% of the business.

21x more likely to qualify within 5 minutes

6 hrs average mortgage lead response time

40% of mortgage leads never contacted

Six Verticals, One Problem

Mortgage brokers, insurance agents, financial advisors, wealth managers, currency exchange firms, and accounting practices look very different on paper. They share one problem: the gap between when a prospect enquires and when a human responds.

The economics make that gap expensive. A closed loan is worth \$3,000 to \$10,000 in commission. A single advisory client is worth more than \$127,000 over its lifetime. An insurance lead bought today decays to a 3 to 5% close rate within thirty days. In every vertical, the firm that answers first captures the value.

Per-vertical economics: industry benchmark data, 2024 to 2026.

Mortgage:
\$3K to \$10K per loan

Insurance:
2 to 3% close rate

Advisors:
\$127K lifetime value

Wealth:
85 to 95% retention

Currency:
round-the-clock demand

Accounting:
3 to 5x seasonal spikes

How AI Voice Agents Work

An AI voice agent is not a robocall or a phone menu. It is a real-time conversation that sounds human, qualifies the lead, and books the appointment, all within seconds of an enquiry. When a lead comes in, the agent calls back in under sixty seconds, day or night.

It is built on production methodology, not a script tree. The agent captures only what the booking needs, asks one question at a time, confirms details it already holds rather than re-asking, and keeps the conversation short without rushing. It qualifies and schedules; the licensed professional advises.

Built on a fast production LLM and natural ElevenLabs voices, with sub-three-second response latency.

Real Results: EasyStart Homes

This is not theoretical. EasyStart Homes, an Australian home builder, has run SVA voice agents live since January 2026. The pilot booked 10 appointments from 60 leads, a 16.7% booking rate. Live performance has held at 17 to 25% across more than six months, with zero human caller hours.

16.7% pilot booking rate (60 leads, Dec 2025)

17–25% sustained live rate, 6+ months

Zero human caller hours required

The current system is not even speed-to-lead. Leads are called in batches, hours later. Adding an instant sixty-second callback models a lift to 28 to 40%, eight to eleven extra bookings a month from the same leads.

SVA internal data, December 2025 to May 2026. Projections are modelled, not guaranteed.

The ROI Model

The maths works at every price point in financial services. The table below uses conservative, benchmark-based inputs. A mortgage broker adding thirteen bookings a month at a \$4,000 average commission and a 50% close rate gains roughly \$26,000 in new monthly revenue. An advisory practice converting fewer than two extra clients a month gains more than \$127,000 in lifetime value per client.

Every line is deliberately conservative. The insurance model assumes only a 15% close on the extra contacts, and the advisory model converts fewer than two new clients a month, yet still returns ten to thirty times in the first year, because a single advisory relationship is worth more than \$127,000 over its life. The accounting case simply recovers 60% of the leads a firm already drops during tax season. None of it depends on the AI being perfect; it only has to be faster than a team that takes hours to respond.

What is one additional client worth to you over their lifetime? How many would it take to justify a system that only charges when it books?

Conservative estimates from published benchmarks and SVA client data. Individual results vary.

Vertical	Leads / mo	Conversion Lift	Monthly ROI
Mortgage Brokers	100	15% to 28% booking	17-52x
Insurance Agents	200	35% to 65% contact	5-14x
Financial Advisors	30	20% to 35% appointment	10-30x
Accounting (tax season)	80	60% lead recovery	11-34x

Use Cases by Vertical

The function shifts by vertical, but the value is the same: faster response, sharper qualification, more booked conversations. Inbound, the agent answers quote and rate enquiries in seconds. Outbound, it revives aged leads and runs structured follow-up cadences. After hours, it covers the third to half of enquiries that arrive when the office is closed.

The mortgage desk wins rate shoppers by being first; the insurance desk revives leads that still convert at 3 to 5% a month past day thirty; the advisory and wealth desks triage high-value prospects and protect the calendar; and the accounting desk absorbs a tax-season surge of three to five times normal volume without a single temporary hire. It is the same agent each time, configured to the questions that desk needs answered.

Qualifying fields are examples; each agent is configured to your own criteria.

Vertical	Primary Use	Qualifies On
Mortgage Brokers	Instant rate and pre-approval response	Loan amount, type, timeline
Insurance Agents	Quote response and aged-lead revival	Coverage, provider, renewal date
Financial Advisors	Seminar follow-up and pipeline nurture	Assets, advisor status, goal
Wealth Management	High-net-worth triage and scheduling	Assets under management, services
Currency Exchange	Rate enquiries and after-hours cover	Amount, currency pair, frequency
Accounting Firms	Tax-season overflow handling	Service, business or personal, entity

Compliance, Handled

AI voice agents can operate compliantly in financial services. The FCC confirmed in 2024 that TCPA rules apply to AI voices, and the one-to-one consent rule took effect in January 2025. Non-compliant calls carry \$500 in statutory damages each, so consent and disclosure are not optional.

SVA's approach is built in from the start. Consent is obtained before any call. The agent discloses that it is AI in its opening, naturally rather than as a robotic disclaimer. It never gives financial advice; it qualifies and books only. Every call is logged and auditable, and data flows into your compliant CRM.

The AI qualifies and schedules. Your licensed professional advises. That line is never crossed.

General awareness only, not legal advice. Verify the current rules for your jurisdiction.

Compliance, Built In

Prior express consent obtained

Call recording with consent

AI disclosure at call start

Data stored in compliant CRM

No financial advice given by AI

Regular compliance audits

The After-Hours Advantage

Between 35 and 50% of financial services enquiries arrive outside business hours (CallRail and Ringba). Mortgage rate comparisons peak on Sunday evenings. Insurance quotes spike after dinner. Tax questions surge on weekends in season. These are not low-intent leads; they are people making decisions when they finally have time.

A lead who enquires at 9pm Saturday and hears nothing until Monday has already contacted two competitors. AI voice agents answer every one of them in seconds, 24 hours a day, 365 days a year, with no overtime and no night shift. After-hours coverage is one of the two mechanisms driving the projected lift to 28 to 40%.

Half your pipeline may arrive after hours. Without coverage, those leads are dead on arrival.

What Implementation Looks Like

Getting started is simpler than most firms expect, and most are live within two to four weeks. The work is front-loaded into a short discovery, and then the system is built around how you already operate rather than forcing you to change it.

You provide four things: access to your CRM or lead system, your calendar for booking, the qualifying criteria that define a good lead for your business, and how you want the agent to represent you. That is the whole ask on your side.

SVA handles everything else: the voice agent design, build, and deployment, the telephony, the CRM and calendar integrations, the compliance framework for your jurisdiction, and the monitoring and optimisation once you are live. The result is a desk that answers every lead in seconds, with no new hire and no disruption to your team.

Timelines vary with integration complexity and internal sign-off.

Week	Focus	What Happens
Week 1	Discovery and Design	Map your lead sources, CRM, and calendar; define qualifying questions and compliance
Week 2	Build and Configure	Voice agent built and trained; CRM and calendar integrated; call flow designed
Week 3	Test and Refine	Internal testing, edge cases, voice and tone tuning, after-hours routing
Week 4	Go Live	Pilot a subset of leads, monitor and optimize, then scale to full volume

Before Your Strategy Call

Help us model your specific ROI before we talk. A few answers let us put real numbers, your lead volume, your conversion rates, and your revenue per client, against the projections in this guide. Five minutes of prep turns a generic pitch into your actual business case.

From those answers we build your numbers: how many extra appointments a month you could expect, what that means in revenue at your average client value, how compliance applies in your jurisdiction, and your projected ROI and payback period. You leave the call with a model, not a brochure, and there is no obligation to take it further.

No preparation required; rough numbers are enough to build a useful model.

We will ask about...	So we can...
Your vertical and monthly lead volume	Size the opportunity and build the model
Current response time and booking rate	Establish the baseline we aim to beat
Average revenue per new client	Turn extra bookings into real dollars
After-hours coverage you have today	Quantify the leads you are missing now
Your CRM and biggest frustration	Shape the integration and the fix

Book Your Free Strategy Call

In thirty minutes, you will know:

- 1 How many additional appointments you could book each month.
- 2 What that means in additional revenue for your firm.
- 3 How compliance is handled for your specific situation.
- 4 Your projected ROI and payback timeline.

We will model your numbers using your actual lead volume and revenue. No obligation, just honest maths.

Not ready to talk? Reply to the email that delivered this guide and ask us anything. A real human will answer. Know another firm that should read this? Forward it on.
